Supplementary Figure 7: The odor solvent alone does not affect wingbeat frequency or amplitude.

(A) The odor solvent alone (paraffin oil, J.T. Baker, VWR #JTS894) has no effect on the wingbeat frequency or amplitude of the wild strain flies \((n=7)\).

(B) Similar negative results were obtained for \(w^{1118}\) flies \((n=6)\).

Data in this figure come from the fixed-tether apparatus.
