KNF DOUBLE-DIAPHRAGM PUMPS
THERE’S NO ESCAPE FROM HERE.

- Ideal for pumping costly, rare, or dangerous gases
- Ultra low leak rates of <6 x 10⁻⁶ L/sec
- Visit www.knfusa.com/noscape
I concede that the situation at universities is significantly different from that at a national laboratory. Argonne people do not have tenure in principle or in practice, and we are used to the idea that we have to justify our situation annually. However, that should not be taken to mean that these working retirements at the Argonne physics division have not really been voluntary. Several of the recent retirees are individuals about whom nobody would credit such a suggestion.

It is also true that the costs generated by a working retiree are not completely negligible and that competition for building space, even office space, can be a serious problem. Those disadvantages have to be weighed against the enormous advantages of making room for young people at our universities and laboratories and in our profession.

MURRAY PESHRIN
Argonne, Illinois

An Undersung Hero
of Sonoluminescence

I wish to call the reader's attention to an omission that I became aware of only after I saw my recent article on sonoluminescence (September; page 22) in print. It is possible to read the article and interpret the work of Seth Putnam's group at the University of California, Los Angeles, as simply following that of our own (formerly at the University of Mississippi and now at the University of Washington). It was Seth's insatiable curiosity concerning the enormous level of energy concentration for sonoluminescence in general that led to his examination of the unique character of single-bubble SL. Without Seth's insightful recognition of the importance of the SL wave duration and his group's gallant attempts to measure this quantity, Felipe Gaitan's discovery would most likely have been relegated to the typical obscurity of a specialized PhD dissertation. Seth certainly deserves credit for advancing this field to the state that it's in today. I was negligent, although certainly not intentionally so, in not making that point clearer.

LAWRENCE CRUM
University of Washington, Seattle

What's Wrong with This Punctuation?

Having argued forcefully in these pages (October 1989, page 9) that one should refuse to publish in journals that do not properly punctuate their equations, I was startled to find the periods removed from the published versions of two sentence-ending equations in my June Reference Frame column (page 9). I would like to state for the record that all equations were properly punctuated in the manuscript. When the punctuation disappeared in the first set of proofs I asked that it be restored. PHYSICS TODAY graciously agreed and kindly provided me with a second set of proofs showing properly punctuated equations. What happened next is anybody's guess. Were I paranoid I would suspect malign forces ready to stop at nothing to advance the antipunctuationist agenda. Not being paranoid I view it as an unfortunate accident, like (but happily less momentous than) the famous 18-minute gap in the White House tapes.

I should also like to correct a factor-of-2 error in the probabilities I said were 85% and 44%. I should have said 45% and 22%. Antipunctuationists, real or imaginary, are not to blame—just my own ineptitude.

Langmuir Obit.
Erratum

In the Robert Langmuir obituary (August, page 75), we gave an incorrect date of death. The correct date is 1 May 1995.

Physics Today Is Looking for Back Issues

Help! Copies of the following back issues of PHYSICS TODAY are needed at the magazine's editorial offices:

Persons who have back issues that they would like to donate should first contact managing editor Ken McNaughton at 301-209-3051 or km3@ap.org. Donors will receive a gray coffee mug embossed with an original drawing of Albert Einstein.

Correction

August, page 21—In the caption for the photo of the comet impact with Jupiter, all the infrared wavelengths should be in microns: 3.09 μm (shown as blue), 3.42 μm (green) and 3.90 μm (red).

STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION

(Act of 12 August 1970: Section 368a, Title 39, USC)

1A. Title of publication: PHYSICS TODAY

1B. Publication no.: 00319228

2. Date of filing: 1 October 1994

3. Frequency of issue: Monthly

3A. No. of issues published annually: 12

1B. Annual subscription price: $140.00

4. Location of known office of publication: 500 Sunnyvale Blvd, Woodbury, N.Y. 11797

5. Location of the headquarters or general business offices of the publisher: One Physics Ellipse, College Park, MD 20740

6. Names and addresses of publisher, editor and managing editor:

Publisher: Charles Harris, American Institute of Physics, One Physics Ellipse, College Park, MD 20740.

Editor: Stephen G. Brush, American Institute of Physics, One Physics Ellipse, College Park, MD 20740.

Managing editor: Kenneth McNaughton, American Institute of Physics, One Physics Ellipse, College Park, MD 20740.

7. Owner: American Institute of Physics, One Physics Ellipse, College Park, MD 20740.

8. Known bondholders, mortgagees and other security holders owning or holding 1% or more of total amount of stock. None.

9. Purpose, function and nonprofit status of this organization and the exempt status for Federal income tax purposes. None.

10. Extent and nature of circulation:

A. Total number of copies (not press run):

Average 125 549 August** 125 328

B. Paid and/or requested circulation:

1. Sales through dealers and carriers, street vendors and counter sales

Average* none August** none

2. Mail subscriptions

Average* 119 275 August** 120 495

C. Total paid and/or requested circulation

Average* 119 275 August** 120 495

D. Free distribution by either carriers, dealers, or others, samples, complimentary, and other free copies

Average* 1 625 August** 1 151

E. Total distribution (sum of C and D)

Average* 120 900 August** 121 810

F. Copies not distributed

1. Office use, left over, unaccounted, spoiled after printing

Average* 2 649 August** 3 158

2. Returns from new agents

Average* none August** none

G. Total (sum of E, F, and 2—should equal net press run shown in A)

Average* 123 549 August** 125 328

* Average number of copies of each issue during preceding 12 months

** Actual number of copies of single issue published nearest to filing date

I certify that the statements made by me above are correct and complete.

Charles Harris, Publisher
