Figure 6: Light curves for 0059+581 at radio along with weekly (left column) and monthly binned (right column) $\gamma$ rays are shown in the top panel. Bayesian block representation is plotted in red line over the light curve. It is scaled relative to the light curve. The DCF using weekly and monthly binned $\gamma$-ray data with significance test using light curve simulation and mixed source method are shown in the middle and bottom panel. The 1$\sigma$, 2$\sigma$, and 3$\sigma$ significance levels are plotted in red, green, and blue dotted lines.
