

Differential expression and function of ABCG1 and ABCG4 during development and ageing

Dragana D. Bojanic¹, Paul T. Tarr⁹, Greg D. Gale⁴, Desmond J. Smith⁴, Dean Bok^{5,6,7}, Bryan Chen⁵, Steven Nusinowitz⁵, Anita Lövgren-Sandblom⁸, Ingemar Björkhem⁸ and Peter A. Edwards^{1,2,3*}

Supplemental Figure 1. ABCG1 and ABCG4 are both expressed in the amygdala of the adult mouse brain. Coronal brain sections from 7-month old *Abcg1*^{+/-} (a) and *Abcg4*^{+/-} (b) mice were stained for β -galactosidase activity. The blue stain identifies ABCG1 and ABCG4-expressing neurons in the amygdala (Am). Magnification is 5X.
