Munger **Africana** Library Notes

Luganda Names, Clans, and Totems

M. B. Nsimbi

Munger Africana Library Notes are eclectic within the field of *Africana*. Issues are generated from seminars by distinguished visitors, reports of current field research, unpublished historical manuscripts, and other material deemed useful to Africanists.

The Editorial Board is drawn from Africanists at the Institute who have published research on African topics:

Robert Bates (PhD MIT) Political Science

Margaret Rouse Bates (PhD Harvard) Political Science

Robert Dilworth (PhD Caltech) Mathematics

Robert Huttenback (PhD UCLA) History

Edwin Munger (PhD Chicago) Political Geography

Roger Noll (PhD Harvard) Economics

Robert Oliver (PhD Princeton) Economics

Martin Rubin (PhD Virginia) English

Thayer Scudder (PhD Harvard) Anthropology

Viewpoints expressed in these Notes are solely the responsibility of the individual authors and may or may not have the concurrence of the editorial board.

Staff:

Editorial Consultant: Wilma Fairchild (MA Clark) Geography

Photographic Consultant: Richard S. Kee

Librarian: Judy Nollar (MA Immaculate Heart)

Managing Editor: Paula S. Hill (MA CSULA, MLS UCLA)

Business Manager: Susan Mandato

This publication is annotated and indexed in the *Historical Abstracts* of the American Bibliographical Center.

Subscriptions: \$12 a volume. Prices of issues vary, but the total cost of a year's issues is in excess of the annual subscription price.

Business and editorial correspondence should be addressed to:
Munger Africana Library
California Institute of Technology
Pasadena, California 91125 U.S.A.

Cover illustration: Original pen and ink drawing of a famous tree in Buganda of historical importance in the legend of the sheep clan. The tree is called Kalyesubula. The artist is F. Sserwabwe.

A NOTE ABOUT THE AUTHOR

M. B. Nsimbi is the grand old man of Luganda linguistics. He was born in 1910 at Narozali in the Masaka District of southern Buganda. His father died when he was only six and he was brought up by his paternal grandmother and a paternal aunt.

His formal education did not begin until he was eleven years old when a relative, Rev. Joseph Ddiba, arranged for him to attend the Kasaala sub-grade school about three miles from his home. Later he attended the Villa Maria elementary school and, having skipped some grades, he was admitted to Kitovu High School in 1925, and went on to St. Mary's College in Kisubi in 1928. Four years later he obtained his teaching certificate from Makerere College. During his college years he was an outstanding cross-country runner.

Mr. Nsimbi served for a time as Assistant Headmaster at Rubaga Boys High and in 1935 volunteered to go to Tanzania to teach mathematics at Tabora School for three years. When he returned to Uganda, he was appointed an Assistant Inspector of Schools, and later became an Education Officer, serving eastern Uganda.

After a course of study at Bristol University in 1955, he specialized in teaching the vernacular in Uganda. Mr. Nsimbi through the years was called upon by the government to translate important documents and speeches in Luganda, English, and Kiswahili. In 1961 he spent a year in the United States at Georgetown University, studying Bantu linguistics in a broader framework.

Mr. Nsimbi has published ten books in Luganda, mostly on the language but also including novels; he has co-authored four other books, and has translated three books into Luganda for use in schools.

He founded the Luganda Language Society, and for four years was Chairman of the Board of Trustees of the National Museum. He has received numerous awards and honors, including an M.B.E. from the British Government for, in the words of the Governor, "your most important contribution to the study and teaching of Luganda." Mr. Nsimbi was invited to be an honored guest at the

1977 Second World Black African Festival of Arts and Culture in Nigeria, but was prevented from attending by the Amin regime.

It is an honor for us to publish in the Notes this valuable work of Michael Bazzebulala Nsimbi. His knowledge of Luganda and its roots is unique.

Our thanks go to Wilma Fairchild for copy editing, to William Kalema for checking the Luganda, and to Linda Benjamin for the difficult task of typing the bilingual manuscript.

Ned Munger

Linguistic Note:

The twenty-seventh letter of the Luganda alphabet is η . For years, printers have struggled to cope with it in standard roman fonts. In this manuscript where "gg" occurs and the "gg" is underlined, it represents the twenty-seventh letter.

INTRODUCTION

"What is in a name?", Shakespeare contended.

If I say to you, "That man there is Kamau, that one is Kambona, and this one is Kajura," that alone is enough indication of their location of origin throughout Eastern Africa. Even among Britons, if one says, "This is Wilson, that is Macdonald, and the other is O'Neil," that alone carries a lot of meaning as to who comes from where.

The collection of names in this volume comprises only CLAN names. In this work our writer, M. B. Nsimbi, has very clearly shown that he fully appreciates the treasure there is in names.

I have been privileged to work with M. B. Nsimbi on some of his many cultural adventures and have thus read through the collection of names for this book. There is no shade of doubt in my mind he has done a very brainy piece of work. And indeed he must have spent both a lot of time and money to produce such comprehensive and orderly lists of names as are contained in this volume. Just as a reference book his order is superb. I was, therefore, happy when asked to introduce his book.

The job undertaken by the writer in this book is our collective responsibility, especially we the ABATAKA (ELDERS) of all cadres. The onus lies on us all to preserve our cultural heritage for future generations and to make them cultivate the interest in it. And as it is further said, "God helps those who help themselves."

He has not exhausted the names that could go in this sort of book, but although nobody knows what the future holds, with this wonderful foundation which the author has laid we have every reason to believe that little by little either he himself or some other Good Samaritans will be able to build up exhaustive lists of our clan names.

J. B. N. Nampenge Nsimbi

PREFACE

Clan names probably form the largest of the six classes into which Baganda traditional personal names can be divided. These classes are as follows:

1. Proverbial
2. Titles and occupational
3. Descriptive and circumstantial
4. Military
5. Religious
6. Clan

Only clan names, male and female, are listed in this work, in alphabetical order. Names of other classes are found in my earlier book, Amannya Amaganda n'Ennono Zaago, Volume I. In Volume II of the same work are found the legendary and the factual history of each clan, together with the names of each clan. Where possible the names are listed under the clan divisions from which they originated.

THE BEGINNING OF CLAN NAMES

When clan names are examined critically, it becomes clear that many of them came from old proverbs which are well known. The key word in a proverb was usually taken out as the personal name without the initial vowel.

Other clan names began as nicknames of all kinds. A good many clan names were derived from people's occupations and from the implements they used. The hills and other natural features found in and around places where heads of clans and heads of clan subdivisions made their permanent settlements turned out to be clan names, i.e., rocks, stones, caves, water-holes, springs, swamps, quagmires, landing places on lakes and rivers, forests, and so forth.

Protective and defensive weapons also helped to swell the number of clan names, such as sticks, spears, and shields. Names of the main houses in patriarchal establishments could also become clan names of particular lineages.

A large proportion of the old popular clan names present puzzles. They cannot be interpreted to give meaning, and it is possible that such names came from languages that have long been dead. It is interesting that some Baganda clan names are also used as personal names in some other parts of Uganda and possibly outside it. It is unlikely that such resemblance is a mere coincidence. It most probably indicates some ethnic relationship which has been somewhat overlaid by tribal movements. The hidden ethnic ties are

more evident in old clan names whose origin is better understood when interpreted in languages spoken outside Buganda, e.g., Kibaale, Kabaale, Nakabaale, (all probably from -eibaale = stone).

There is another aspect of clan names that we should not overlook. In most clans there are two kinds of names which, as a rule, are given only to special members of the clan to which they belong. The first of these are the titles of most heads of clans. Names of this kind have been marked with in the following list -- e.g., +Kayiira, +Lwomwa. The second kind represents the titles of some heads of major divisions and other hereditary names of historical or ritual significance within the clan. All names in this category are marked with an asterisk -- e.g., *Ssemuggala, *Kasiga.

From the time clan names came into vogue the tradition has been for each clan to have a set of names, male and female, for its members. However, there has always been some deviation from usually ask the question, "Why do we sometimes find someone called by a well-known name of a clan to which he does not belong?" The answer is that some clan names are shared by more than two clans. There are several reasons for this:

1. Embodiment of the dead (Okubbula)

In naming a newborn baby the essence is to give it a name in memory of a close ancestor who was of good character. The ancestor embodied must be in the baby's paternal lineage; i.e., he must be of the same clan and totem as the ancestor. The name chosen for the baby can be of any kind except a title and some circumstantial names. A name other than that of the baby's clan is of course generally excluded. The ancestor or relative who is to be commemorated must be a grandfather, a great-grandfather, grandaunt, and the like. The names of people known to have been of bad character, such as murderers, suicides, thieves, and sorcerers, were allowed to die with them.

It sometimes happens, however, that certain men become greatly attached to their daughters' sons and request that their own names be passed on to these grandsons in their memory. Some mothers do the same to their daughters' girls or their sons' daughters. If the names taken from the maternal side in this way are passed on to the descendants of their recipients, they can in course of time be assimilated in the other clan. This is why some people are called by popular clan names that do not belong to their clans.

People called by names of other clans sometimes give amusing or confusing surprises. The following example may help to make the point more clear. Suppose you are a stranger

in a place. If you meet someone called Sessanga you at once take it for granted that he is a member of the Elephant Clan, and if you belong to the Elephant Clan you feel that you have met a relative. If you later learn that the man belongs to an entirely different clan you cannot help being surprised or disappointed.

2. Friendly neighborhood

There is sufficient evidence to show that neighborly heads and subheads of different clans, together with their clansmen, generally lived in harmony. The need for security and the prohibition against marrying within the clan compelled members of different clans to maintain friendly relationships. As a result certain clan names would creep into the other clan and eventually become absorbed.

3. Proverbs

No speaker can claim a monopoly over the proverbs of his language. Consequently if one clan raised a certain proverbial name to the status of a clan name, any other clan had the right to do so. Pride of clan, however, prevented many clans from adding to their repertoire names that had already been ratified by other clans. Also, some people do not accept certain proverbial names as genuine clan names in their clans.

4. Massacres

Collective punishments of all kinds, and in particular death, were from time to time meted out to members of a clan if one of them, especially a chief or a servant in the royal household, offended the king. Members of a persecuted clan would seek refuge in a friendly clan. They would take on new names as additional cover, and would identify themselves with the clan that gave them refuge. The safest place in which to take shelter was a home or family in which one had already made blood-brotherhood. After the persecution many survivors established identity in their proper clans under their old names but others retained their false names, which would in time become recognized as clan names.

5. Splitting of Clans

Rival claims for headship of clans and clan subdivisions have always been one of the main causes of bitter disputes among members of certain clans. In some clans quarrels centered around the founder of the clan. Senior members in some clans flatly refuse to acknowledge heads accepted by other members of their clan. This sometimes results in the clan splitting into

two independent clans, each with its own head and totem and new names. The splinter clan usually retains some of the names of the parent clan.

6. Preference

Some people take a fancy to certain names of other people and take them on or give them to their children. If they are clan names, they soon or later become accepted in the clan.

SPELLING OF NAMES

Some people spell many names as they please, with little or no regard to the rules of standard spelling. One person may spell Bbombokka as Bomboka, while another may spell it Bbomboka. The writer has seen the name Naluggya spelled in three different ways, all of which are wrong: Nalugya, Naluija, Naluja.

Luganda speakers generally pronounce Baganda names in the same way, or at least they try to do so. This is the reason why they should also write them in the same way. Apart from the difficulty of reading badly spelled names, the substitution of one letter for another in a given name or the removal of one syllable from a name can have an adverse effect. The name can be shifted from one clan to another or even become neutral.

THE COMPLEX ROLE OF THE NOUN PREFIX NA

Some people hold the notion that all names beginning with Na are female. This is far from the truth, as will be seen in this work. Another wrong assumption is that when Na is prefixed to a male name, or when it is superimposed to its other initial syllable, the name becomes female. This is true in some cases but it is not an infallible rule.

It is a strange anomaly that when Na is prefixed to some male clan names, the female names you get may be of entirely different clans. Similarly, removal of the Na prefix from a male name can easily transfer it to a different clan. The conclusion we draw is that there is no fixed formula for the formation of clan names or the transferring them from one sex to the other.

THE IMPORTANCE OF TONE

Correct rendering of tone is an essential part in the proper pronunciation of Luganda names, and in particular clan names. There are two reasons for this. (1) If the correct tone of

a name is distorted it jars on the ears of the hearers and the name may be difficult to place in its proper clan. (2) Two names that have the same spelling may differ in pronunciation. The difference in tone pattern generally indicates that the two names belong to different clans. For example the names Kalinda (of the Colobus monkey) and Kalinda (of the Oribi antelope) have identical spellings but they differ tonally in pronunciation. The first is pronounced with a low-high-low lone pattern but the second has a low-high-high tone pattern.

Tone is generally indicated with the following tone marks:

- ˘ high
- ˘ low
- ˘ falling

Thus the name given above should be marked as follows:

Kālindà (of the Colobus Monkey Clan)

Kālindá (of the Oribi Antelope Clan)

Some names, particularly those that are not very common, are difficult to pronounce unless a speaker or reader is familiar with them. Often people read names according to what appears to be their intrinsic meaning. Appearances of this kind are sometimes deceptive. For example, the name Ssaabwé (of the Civet Cat Clan) is often mispronounced with the same low-high tone pattern as Ssààbwé (which means sheep's dung). In that, the correct name Ssààbwé has a low-low-falling tone pattern. The word Kàbóngé means madness but the name which appears to have come from it is pronounced Kàbóngé. Nyênjé is a common house insect but the personal name from it is pronounced Nyênjé. The word mùbúyà means a simpleton but the name which is spelt in the same way is pronounced Mùbúyá and it is a clan name for both the Hippopotamus and the Monkey Clans.

To assist readers, an effort has been made to indicate tone for all the names in this work, but only low and falling-high tone marks have been used.

Although a great effort was made to collect all known clan names, the writer does not claim to have succeeded. The doubts that many informants displayed about the names of their clans make it probable that many names have been left out. Perhaps also there are some names that have not been listed under their proper clans. However, it is hoped that all mistakes of commission and omission in this work will be corrected in the future.

ACKNOWLEDGEMENT

To Dr. Livingstone Walusimbi of the Department of Languages, Makerere University, I owe a great debt of gratitude for the work of tone marking he did throughout the compilation.

Michael B. Nsimbi

The Hunter and His Art: A Survey of Rock Art in Southern Africa
Jalmar and Ione Rudner

60 color plates; 87 black and white drawings; maps; diagrams
288 pages; hard cover; 10 x 11½ inches
\$32.00 plus 85¢ for postage and handling

The Rudners are well known both inside and outside South Africa for their work in archaeology and ethnology. Their studies in many remote corners of South Africa, South West Africa, Rhodesia, Angola, Lesotho, and Botswana are reflected in this survey of rock art in Southern Africa. During their 20 years of travel, the Rudners made hundreds of tracings from the original paintings and engravings, selecting 60 to be reproduced in color in this book, along with numerous other drawings in black and white.

Africana Byways

Edited by Anna H. Smith

28 drawings and photographs
189 pages; hard cover; 6 x 9 inches
\$14.00 including postage and handling

The dean of Africana libraries in South Africa has gathered and edited a fascinating and valuable series of articles of interest to the Africana collector. The pieces, all by acknowledged experts in their fields, cover historical photographs, reprints of Africana books, Johannesburg newspapers from the period 1887-1889, botanical illustrations, early cartoons, and Ndebele arts and crafts, and others. There is a detailed 18-page index.
