Density-Dependent Selection in Vesicular Stomatitis Virus

Isabel S. Novella, Daniel D. Reissig, and Claus O. Wilke

*Department of Microbiology and Immunology, Medical College of Ohio, Toledo, Ohio 43614,
and Digital Life Laboratory, California Institute of Technology, Pasadena, California 91125*

Volume 78, no. 11, p. 5799–5804, 2004. Page 5801: Figure 3 shows the fraction of MARM N, rather than the ratio of MARM N to wild type. The correct figure is shown below. The line represents an exponential fit to the data, $\exp(-0.83 + 0.51t)$, where t indicates the passage number. The slight deviation in the slope from passage 0 to 1 compared to the slope from passage 1 to 2 is not statistically significant (t test, $P = 0.15$, and Wilcoxon rank sum test, $P = 0.27$). All conclusions of the article remain unchanged.
