Synthesis of End-Functionalized Poly(norbornene)s *via* Ring-Opening Metathesis Polymerization (ROMP)

Christopher W. Bielawski, Diego Benitez, Takeharu Morita, and Robert H. Grubbs*

Arnold and Mabel Beckman Laboratories of Chemical Synthesis,

Division of Chemistry and Chemical Engineering,

California Institute of Technology, Pasadena, California 91125

Supporting Information

General information. ^{1}H NMR spectra were recorded in a GE QE-300 Plus (300.10 MHz ^{1}H) spectrometer or a JEOL GX-400 (399.65 MHz ^{1}H) spectrometer. Chemical shifts were recorded in parts per million (δ) and referenced to residual protio solvent. Either $CDCl_3$ (PNBs **3** – **5** and **12**) or toluene-d_8 (PNB **6**) were used as solvent.
