In the third paragraph of Section 5.1, the calculated rotational breakup limit for AB Pic B omitted a factor of 2π . The rotational breakup limit of AB Pic B should correspond to a 1.57 hr rotation period instead of 0.25 hr. Therefore, the observed 2.1 hr periodic signal in AB Pic B’s light curve should be equivalent to 75% instead of 12% of the breakup limit. With a 2.1 hr rotation period and for angular momentum-conserved contraction, the rotation velocity of AB Pic B will likely approach or even exceed the breakup limit when AB Pic B’s radius approaches $1 R_{\text{Jup}}$.

These corrections do not affect any conclusions of the original paper.

¹³ NASA Earth and Space Science Fellow.
