Supplementary Figure 1: Probabilities of FRBs 180810.J1159+83 and 180814.J1554+74 having DMs consistent with originating within various distances. The curves show evaluations of the probability distribution $P(< DM_X | d)$ referred to in the main text.

Supplementary Figure 2: Histograms of 90%-confidence lower-limit estimates of the occurrence rate of simulated FRB samples (see Methods). The true rate in each case was unity. The overlapping vertical dashed lines indicate the 90th percentiles of the distributions.
