

Figure S6: Expression of the asRhIS. Term-seq and strand-specific RNA-seq data (corresponding condition of Fig 2A) for the *asRhIS* locus in the PAO1 $\Delta lasI \Delta rhII$ (MPK0493), in the -AHLs condition. The RNA-seq reads of RhIS (blue line, orange arrow), asRhIS (red line, red arrow) and the asRhIS term-seq position (green arrow) is indicated. The gap in RNA-seq coverage within *rhII* is due to the deletion of the ORF.
