Supplementary Table 1. Distance comparisons in Env trimer structures. Structures are grouped into four conformational states: closed (unliganded and bound to Fabs), partially open (bound to 8ANC195, sCD4, and either 17b or 21c), and open (bound to sCD4 and 17b), and the open class I and class II E51-sCD4-BG505 complexes (this study). The PDB identifier is given for each structure. PDB coordinates for gp120 subunits within a trimer were used to measure distances on adjacent protomers between V3 base residue His330_{gp120}, V1V2 base residue Pro124_{gp120}, and the CD4 binding site residue Asp368_{gp120}.

Supplementary Table 2. PDB entries for structures presented in Extended Data Figure 5 and their corresponding references.
